

JAMIE PASK

Web Developer

Los Angeles, CA | jamiepask.com | contact@jamiepask.com | +1 (818) 636-5870

An efficiency driven web engineer, freelancing for various brands since 2019. Using a strong, fundamental knowledge of website architecture, I've built and maintained custom sites and applications on a range of platforms. Currently seeking an opportunity to expand my knowledge and collaborate with a lively, forward thinking team.

WORK EXPERIENCE

TECHYSCOUTS

Lead Developer | Dec, 2019 - Current

Coordinated web development, deployment and maintenance techniques for collaborative work. In particular, creating local environments within Docker containers, incorporating CI/CD processes with GIT hooks and documenting preferred workflows for future projects • Built custom Wordpress themes, Shopify themes and apps using modern build tools, specifically Webpack and Gulp, to incorporate current web technologies and improve maintainability • Produced technical solutions for a variety of reasons, ranging from UI to hosting issues • Consumed a range of third party API's. For instance, I have utilized Loyalty Lion's API to generate custom CSV files, exporting and storing output for local download within an S3 bucket • Replicated Figma/Photoshop/XD files to pixel accuracy • Adhered to coding standards through consistent research and incorporating linters into my workflow.

FREELANCE

Web Developer | Aug, 2020 - Current

Partnered on an ongoing basis with brands and individuals seeking website creation, existing site enhancements or technical solutions • Connected with clients via Zoom, Slack and other communication tools to report project progress • Incorporated Shopify into a pre-existing NextJS application by consuming the Storefront API. The project involved pulling Shopify product data for displaying and filtering, creating a functional AJAX cart with Redux state management and ensuring a robust checkout system • Built emailing templates with Mailchimp and other CRM's.

PERSONAL PROJECT

Designed a custom, personal portfolio using Adobe XD • Built a statically generated site with NextJS with hosting via an S3 bucket, routing through a Cloudfront CDN for SSL verification • Achieved top lighthouse scores through an understanding of core site performance metrics. Specifically, optimized images served from Cloudinary, critical CSS inlined, efficient cache policies and compressed files • Used Buddyworks to trigger a deployment workflow via a git push involving build and upload steps.

EDUCATION

CARDIFF METROPOLITAN UNIVERSITY

Bachelor of Science (B.Sc.), Architectural and Building Sciences/Technology | 2011 - 2014

Following a formal education in Architectural Design and Technology, I built a strong foundational knowledge of programming through the extension of credible online tutorials and consistent practical applications.

SKILLS

ReactJS	SQL / MongoDB	NodeJS	Wordpress	Shopify	Bootstrap	PHP	SASS	GIT
Webpack / Gulp	Docker	AWS / Heroku	Adobe Suite	API Consumption	Site Performance
